

RELEASE 7.7.0

SOFTWARE VALIDATION SUMMARY

Validaide B.V. hereby confirms that the Validaide software application Release 7.7.0 has been developed in accordance with the Standard Operating Procedures as defined in the company's current version of the Quality Management System. The software is classified as category 3 according to GAMP5 and Release 7.7.0 will be validated according to GAMP5 and FDA 21 CFR Part 11 guidelines.

Summary of Design & Operational Qualification

The development process started with capturing the user requirements as User Stories. User stories incorporated in the specified release are documented as electronic records and developed in accordance with our Software Development Standard Operating Procedure.

Automated functional test cases have been developed and/or maintained for each User Story in accordance with our Software Testing Standard Operating Procedure, with traceability between User Stories and test cases documented in electronic records.

Prior to the implementation of this Release, the functional tests for new and existing functionality in Validaide have been performed and successfully passed. In total, 8456 tests were successfully executed and passed on 30th July 2025, consisting of 5503 functional tests, 1903 security tests and 1050 compliance tests.

All known problems or issues are documented in the development support system.

Summary of IT Infrastructure Qualification

Validaide Release 7.7.0 will be implemented into the production environment on 20th August 2025 in accordance with the current Release Management Standard Operating Procedure. A post-release evaluation will be conducted, and the results will be documented in the corresponding post-release evaluation document.

Validaide Release 7.7.0 will be hosted in a production environment for which an IT Infrastructure Qualification has been performed. The results of the IT Infrastructure Qualification have been documented, and include a description of the physical security, data security, back-up processes, service level agreements and server monitoring processes.
